

TABLE OF CONTENTS

Title of Experiment	Pages
Potato	
Evaluation of fungicides to control early blight and late blight of potato – Hancock	1-14
Evaluation of the effect of fungicides applied at planting, hilling and to the foliage, on control of potato diseases	15-22
Evaluation of potato cultivars and breeding selections to identify resistance to early blight and late blight.....	23-34
Evaluation of potato seedpiece treatments - Russet Burbank – Hancock.....	35-38
Evaluation of the effect of potato seedpiece size, treatment and within row spacing on emergence, disease control and yield - Hancock, 2000.....	39-44
Evaluation of fungicide treatments applied to potatoes at planting or at hilling for disease control - Spooner	45-46
Evaluation of potato cultivars and breeding selections to identify resistance to common scab - Antigo	47-48
The effect of in-furrow Quadris application on disease control and potato quality – Endeavor, 2000	49-50
Evaluation of the effect of foliar fungicides on potato storage quality - 1999.....	51-54
Evaluation of potato cultivars and breeding selections to identify resistance in tubers to early blight, late blight and pink rot, 1999.....	55-58
Bean	
Evaluation of chemical control of white mold on snap bean.....	59-62
Integration of biological and chemical controls for improved management of white mold on snap beans	63-64
Carrot	
Evaluation of carrot cultivars and breeding selections to identify resistance to foliar blights	65-74
Evaluation of selected fungicides to control carrot foliar blights	75-76
Cucumber	
Evaluation of selected fungicides to control Phytophthora blight and fruit rot of cucumber	77-78
Pumpkin	
Evaluation of control of powdery mildew on pumpkin with fungicides - Hancock	79-80
Peppermint	
Initial evaluation of the efficacy of Quadris fungicide to control white mold/stolon decay – 1999-2000.....	81-82
Meteorological Data	
Appendix I - Antigo.....	83-84
Appendix II - Hancock.....	85-88
Appendix III - Spooner.....	89

Acknowledgments

We thank Mike Bertram, Nick Breitbach, Jeff Breuer, Cathy Brierley, Glenn Carlson, Jack, John and Ned Crescio, Tanya Ebbert, Francis Gilson, Irwin Goldman, Richard and Roderick Gumz, Tom Guth, Geri Haberlach, Thelma Heidel, John Helgeson, Gary Humphrey, Jacqueline Japuntich, Florence Johnson, Rob Kane, Steve Keil, Doug Klabunde, T. J. Klahn, Chuck Kostichka, Sara Mahoney, Paul Miller, Kristine Naess, Cheryl Pionke, Jon Rhode, Elmer Rose, Stephanie Rust, Gary Staffeldt, Roger Stratton, Rebecca Weld and Ken Williams for their support and assistance. We also thank all the plant breeders and seed companies who provided material for us to evaluate in our variety trials (sources listed with trials) and the Wisconsin Seed Potato Certification Program.

The financial support of Agrol International, American Cyanamid Co (BASF Corporation), Asgrow Seed Research, Auxein Corp., Aventis CropScience, BASF Corporation, Bayer Corp., Bejo Seeds, Inc. E. I. Du Pont de Nemours & Co., Elf Atochem North America (Cerexagri), Griffin Corporation, Gustafson Inc., Midwest Food Processors Association, Novartis Crop Protection (Syngenta), Polonica International, Rohm and Haas Company, Sipcarn Agro, Tomen Agro, United Agri Products, Uniroyal Chemical, USDA, UW-Madison College of Agricultural and Life Sciences, Wilbur Ellis, Wisconsin Potato Industry Board, Wisconsin Potato and Vegetable Growers Association, and Zeneca Ag Products (Syngenta) is gratefully acknowledged.
