All of the late blight samples that we have received for testing, to date, are of the US-23 clonal lineage/strain. This type can be controlled with mefenoxam/metalaxyl fungicides. In review, the samples were from:

- northern Adams Co. (from 6/23) - US-23
- western Waushara Co. (from 7/8) - US-23
- southern Wood Co. (from 7/9) - US-23
- Waushara Co. (from 7/9) - US-23
